OUTPATIENT PHARMACY (OP)

TECHNICAL MANUAL / SECURITY GUIDE

Version 7.0

December 1997

DRAFT

Department of Veterans Affairs
Veterans Health Administration
Office of the Chief Information Officer

Table of Contents

Introduction

This document briefly describes the technical and security aspects of Version 7.0 of Outpatient Pharmacy (OP). It is intended for members of the Automated Data Processing (ADP)/Information Resources Management (IRM) staff who have had experience with other Veterans Health Information Systems and Technology Architecture (**V***IST***A**) software and have worked or will work with a package coordinator who is familiar with the functions of the Outpatient Pharmacy in a VA Medical Center. Readers without this background are referred to the documentation for the Kernel, the VA FileMan and the Users' Manual for this release.

The Outpatient Pharmacy package provides a method for managing the medications given to veterans who have visited a clinic or who have received prescriptions upon discharge from the hospital. Prescription labels are automatically generated and refill request forms are printed. Medication histories are kept online to permit checks for potential interactions. Profiles can be generated to assist the clinician in managing the patient's medication regimen. Management reports aid the pharmacy in controlling inventory and costs.

A number of site parameters allow the individual Department of Veterans Affairs Medical Center (VAMC) to customize the package to meet local needs. The users' manual describes these site parameters and the ways they influence the operation of the package.

This version of Outpatient Pharmacy can only be run in an environment that already has several existing features. Obviously, it can only be run with a standard MUMPS operating system. It also requires the following VA application software:

Package	**Minimum Version Needed**
Pharmacy Data Management	1.0
VA FileMan	21.0
Kernel	8.0
PMIS	5.3
National Drug File	3.16
Integrated Billing	2.0
Fee Basis	3.5
Adverse Reaction Tracking	4.0
Inpatient Medications	4.5
IFCAP	5.0
Laboratory	5.2
Order Entry/Results Reporting	3.0

The above software is not included in this package and must be installed before this version of Outpatient Pharmacy is completely functional.

Orientation

Online Documentation

Throughout the entire OP package, you are able to enter a question mark (?) to obtain online information to assist you in your choice of actions at any prompt.

Additional information about this package is contained in help prompts and comments which are available online. Detailed information can also be obtained by using the Kernel routine XINDEX to produce detailed listings of the routines and by using the VA FileMan to generate listings of data dictionaries for the files.

The Data Dictionaries (DDs) are considered part of the online documentation for this software application. Use VA FileMan option *List File Attributes* [DILIST], under *Data Dictionary Utilities* [DI DDU], to print the DDs.

Implementation and Maintenance

Resource Requirements

This version (7.0) of Outpatient Pharmacy contains approximately 318 routines including all PSO* routines and the VEXRX routine, and compiled templates, PSOX* and APSPT* that take up approximately 118 K disk space.

Response Time monitor hooks have been placed in the following routines:

Routine	Purpose
PSON52	File New Prescriptions in File #52
PSORN52	File Renewed Prescriptions in File #52
PSOR52	File Refill Prescriptions in File #52

This package requires 21 files (see "Files" section in this manual). A typical site might require the following disk space:

1 Mbyte	DRUG file (#50) (4000 entries)
3 Mbytes per month	DRUG COST file (#50.9) (800 items dispensed by 200 dispensing physicians)
150 Mbytes	PRESCRIPTION file (#52) (500,000 prescriptions)
50 Mbytes	PHARMACY PATIENT file (#55) (500,000 prescriptions)
about 1 to 2 Mbytes	routines and the other files (except for #52.4, #52.5 and #52.8)
3 to 5 Mbytes of "swing space"	Files #52.4, #52.5 and #52.8

So, you might expect Outpatient Pharmacy to require about 350 Mbytes of disk space. The actual disk utilization will, of course, depend mainly on the size of the 3 large files - #52 (PRESCRIPTION), #55 (PHARMACY PATIENT) and #50.9 (DRUG COST).

The requirements for Video Display Terminals (VDTs) and printers also depend upon the number of transactions performed by the outpatient pharmacy. You should have about 3 VDTs and 1 printer for each 500 prescriptions (or fraction of 500) issued each day. If mail-out refills are handled separately, you should also have at least one VDT and one printer for each 500 refills. You may also want a VDT and printer in the supervisor's office and one VDT in the office of people who are assigned to consult with patients about their medication regimens.

There are no special device requirements unless you opt to print barcodes on labels. In this case, the label printer must be capable of printing barcodes and must be able to be set to a form length of either 4 inches or 24 lines. The section in this document on barcodes provides additional information about this function.

Options to be Deleted during Install

Option Name	Menu Text
PSO DRUG	Drug Enter/Edit
PSO DRUGMENU	Drug/Drug Interaction Functions
PSO HOLDRX	Hold Rx
PSO INTERACTION	Drug Interactions Menu
PSO INTERACTION LOCAL ADD	Enter/Edit Local Drug Interaction
PSO INTERACTION SEVERITY	Edit Drug Interaction Severity
PSO LAB MONITOR	Mark/Unmark Lab Monitor Drugs
PSO NEW	New Prescription Entry
PSO REF	Refill Prescriptions
PSO RXEDIT	Edit Prescriptions
PSO RXHOLD	Hold Features
PSO RXPAR	Partial Prescription
PSO SIGED	Medication Instruction File Add/Edit
PSO UNHOLDRX	Unhold Rx
PSO FACILITY SETUP	Enter Facility Data for Clozapine
PSO MARK DRUG	Mark Clozapine Drug
PSOL UNMARK DRUG	Unmark Clozapine Drug
PSOARCCO	Find
PSOARCHLIST	List One Patient's Archived Rx's
PSOARCIN	Tape Retrieval
PSOARCPURGE	Purge
PSOARCSV	Save

Templates to be Deleted during Install

Input	File
PSO DRUG	#50
PSO SIGED	#51
PSO BATCH PARTIAL	#52
Print	**File**
PSO ACTION PROFILE #3	#44
PSOBJP	#52
Sort:	**File**
PSOBJP	#52

Routines to be Deleted during Install

PSOCLDRG	PSOCLUS1	PSOCLUS2	PSOCLUS3	PSOCSRL1
PSOCSTAR	PSODRUG	PSOGMINS	PSOGMP12	PSOGMP25
PSOLIST	PSONODIB	PSONUM	PSOPOST3	PSOPRE
PSORX	PSORXPAR			

Prior to installation, it is recommended that the system utility to delete routines be used to delete all PSO* routines. If you have local modifications to any PSO* routines, please backup those routines. After installation of Version 7.0, please do a compare of routines to note the changes between your locally modified routines and the Version 7.0 routines. Version 7.0 of Outpatient Pharmacy has been modified greatly, please be careful when installing local modifications.

Setting up the Bingo Board Device

You must set up a dedicated device to be used for the bingo board. The device setup is similar to that used to set up a printer, except the sub-type will be C-VT. Only devices with the sub-type C-VT will be allowed to be entered at the "DISPLAY DEVICE" prompt in the *Enter/Edit Display* [PSO BINGO ENTER/EDIT DISPLAY] option found on the *Bingo Board Manager* [PSO BINGO MANAGER] menu. For further information, see your site's systems guide for information on setting up the device. Once a dedicated device is set up, the bingo board can be scheduled to automatically start and/or stop at user-defined times.

Mail Group Setup for the HL7 External Interface

A mail group and device **must** be set up in order to run the HL7 external interface. The recommended name of the mail group is PSO HLGROUP1. The recommended device name is PSO HLDEVICE1.

Using the Maintenance Menu

The *Maintenance (Outpatient Pharmacy)* [PSO MAINTENANCE] menu is used for implementation as well as maintenance of the Outpatient Pharmacy package. The first five options, *Site Parameter Enter/Edit* [PSO SITE PARAMETERS] (example follows), *Edit Provider* [PSO PROVIDER EDIT], *Add New Providers* [PSO PROVIDER ADD], and *Queue Background Jobs* [PSO AUTOQUEUE JOBS] are used for implementation. The remaining options on this menu may be used for maintenance. (An example is given below for the *Queue Background Jobs* [PSO AUTOQUEUE JOBS] option. See the *Outpatient Pharmacy V. 7.0 User Manual* for an explanation of the other options on this menu.)

Maintenance (Outpatient Pharmacy) [PSO MAINTENANCE]

- *Site Parameter Enter/Edit*
- *Edit Provider*
- *Add New Providers*
- *Queue Background Jobs*
- *Autocancel Rx's on Admission*
  Bingo Board Manager ...
  Edit Data for a Patient in the Clozapine Program
  Enter/Edit Clinic Sort Groups
  Initialize Rx Cost Statistics
  Edit Pharmacy Intervention
  Delete Intervention
  Auto-delete from Suspense
  Delete a Prescription
  Expire Prescriptions
  Purge Drug Cost Data
  Purge External Batches
  Recompile AMIS Data

Queue the Background Jobs

This option is used to queue all background jobs. They are as follows:

- Autocancel Rx's on Admission
- Initialize Rx Cost Stats
- Initialize Management Stats
- Compile AMIS Data (NIGHT JOB) with a default rescheduling frequency of every 24 hours.
- Expire Rx's
- Auto-delete from Suspense

You must enter a date and time at least 2 minutes in the future. The jobs should be set to run at a time convenient for the site.

You need to only respond to the following prompts. All others will be left blank.

QUEUED TO RUN AT WHAT TIME:	This is the date/time you want this option to be started by TaskMan.
RESCHEDULING FREQUENCY:	If this field is blank then the job will run only once.

Example: View of Queue Background Jobs Screen

```
Select Maintenance (Outpatient Pharmacy) Option:    Queue Background Jobs
```

☞ If time to run option is current do not edit.

```
                        Edit Option Schedule
   Option Name: PSO AUTOCANCEL
   Menu Text: Autocancel on Admission                TASK ID: 198352

  QUEUED TO RUN AT WHAT TIME: SEP 5,1996@09:00

DEVICE FOR QUEUED JOB OUTPUT:

 QUEUED TO RUN ON VOLUME SET:

      RESCHEDULING FREQUENCY: 24H

             TASK PARAMETERS:

            SPECIAL QUEUEING:

COMMAND:                                  Press <PF1>H for help   Insert
```

Files

This package requires the 21 files listed below. Information about the files can be obtained by using the VA FileMan to generate a list of file attributes.

The Data Dictionaries (DDs) are considered part of the online documentation for this software application. Use VA FileMan option *List File Attributes* [DILIST], under *Data Dictionary Utilities* [DI DDU], to print the DDs. The following are the files for which you should print DDs:

Outpatient Pharmacy Files

FILE #	NAME	UP DATE DD	SEND SEC. CODE	DATA COMES W/FILE	SITE DATA	RSLV PTS	USER OVER RIDE
50.073	DUE QUESTIONNAIRE	YES	YES	NO			
50.0731	DUE ANSWER SHEET	YES	YES	NO

59.2	WAITING TIME	YES	YES	NO			
59.3	GROUP DISPLAY	YES	NO	NO			
59.8	OUTPATIENT CLINIC SORT GROUP	YES	YES	NO			

The namespaces for the Outpatient Pharmacy package are PSO and APSP.

Routine List

The following is a list of routines you will see for Outpatient Pharmacy when you load the new routine set. The first line of each routine contains a brief description of the general function of the routine. Use the Kernel option XU FIRST LINE PRINT (*First Line Routine Print*) to print a list of just the first line of each PSO* routine.

304 Routines less PSOX* AND APSPT* routines.

Exported Options

Menu Assignments

Unless you have already assigned menus, the menu PSO MANAGER (Outpatient Pharmacy Manager) should be assigned to the Package Coordinator for Outpatient Pharmacy. It should also be added to the menu of the Site Manager and any Automated Data Processing (ADP)/Information Resources Management (IRM) staff that s/he selects to help in the operation of Outpatient Pharmacy. The menu PSO USER1 (Pharmacist) should be assigned to all pharmacists and the menu PSO USER2 (Pharmacy Technician) should be assigned to all pharmacy technicians and other pharmacy personnel who may view prescriptions and/or inquire into other Outpatient Pharmacy files.

Security Keys

PSORPH	This key should be assigned to all pharmacists, the package coordinator, and all appropriate members of the ADP/IRM staff.
PSOA PURGE	This key should be assigned to the package coordinator and/or any person who will be responsible for archiving prescriptions.
PSOLOCKCLOZ	This key is used to override the lockouts in the Clozapine options. All members of the Clozapine treatment team must be entered as users on your system and must be given this key. All pharmacists who have the ability to override the lockouts in this option must also hold this key. The Pharmacy Service representative of the Clozapine treatment team should identify these pharmacists.
PSOINTERFACE	This key is used to access the *External Interface Menu* [PSO EXTERNAL INTERFACE].

Package Security

Electronic signatures may be established by using the Kernel option, *Electronic Signature code Edit* [XUSESIG].

In Kernel V. 8.0 the *Electronic Signature code Edit* [XUSESIG] option has been tied to the Common Options, under the *User's Toolbox* [XUSERTOOLS] submenu, for easy access by all users.

Archiving and Purging

Detailed information is kept for each prescription, including all information about the original prescription, all refills and all editing. An average prescription requires about 300 bytes (0.3 Kbytes) of disk storage. The archiving options under the manager's menu allow the package coordinator and IRM/ADP staff to manage this file. Old prescriptions, typically those which have been expired or canceled for more than a year, can be saved to tape and then purged from online storage. The users' manual describes the operation of these options. Because not all prescriptions require the same amount of space and because of the way the operating system utilizes the disk, you should not expect to regain 300 bytes of disk storage for every prescription purged. As prescriptions are purged, all references to these prescriptions from other files are also deleted.

The RX SUSPENSE file (#52.5) holds information about all prescriptions that have been suspended for later printing. There is an automatic purge for this file for prescriptions printed from 7 to 90 days ago. The package coordinator can run the option PSO PNDEL (*Auto-delete from Suspense*) at regular intervals to purge this file of suspended prescriptions which have been printed 7 to 90 days ago. The purging is tasked to run every 7 days.

Specific entries can be deleted using the *Change Suspense Date* [PSO PNDCHG] or *Pull Early From Suspense* [PSO PNDRX] options.

Drug cost data can now be purged using the *Purge Drug Cost Data* [PSO PURGE DRUG COST] option.

Setting up the Archive Device

The following are examples for the archive device setup for file and tape.

☞ These examples may differ from site to site. If your device differs, check with your IRM Service for information on setting up your device.

```
HOST FILE SERVER (HFS) DEVICE SETUP:

NAME: HFS                                    $I: ARC0797.TMP

```

Callable Routines

Entry points provided by the Outpatient Pharmacy package to other packages can be found in the External Relations section of this manual. No other routines are designated as callable from outside of this package.

External Interfaces

Steps for Setup/Shutdown of the External Interface

The following screens depict the steps necessary to setup and shutdown the external interface for Version 1.6 of the **V***IST***A** Health Level Seven (HL7) application package. For more information on the Outpatient Pharmacy HL7 Specification see Appendix A of this manual.

The following examples are options from the HL7 package. The top level menu option being used is the HL MAIN MENU option [*HL7 Main Menu*].

Setting Up the Interface:

```
Select Menu Option:  HL  HL7 Main Menu

   1      V1.5 OPTIONS ...
   2      V1.6 OPTIONS ...
   3      Activate/Inactivate Application
   4      Print/Display Menu ...
   5      Purge Message Text File Entries

Select HL7 Main Menu Option:  V1.6 OPTIONS

   1      Communications Server ...
   2      Interface Workbench
   3      Message Requeuer

Select V1.6 OPTIONS Option:  COMMunications Server

   1      Edit Communication Server parameters
   2      Manage incoming & outgoing filers ...
   3      Monitor incoming & outgoing filers
   4      Start LLP
   5      Stop LLP
   6      Systems Link Monitor
   7      Logical Link Queue Management ...
   8      Report

Select Communications Server Option:  START LLP

This option is used to launch the lower level protocol for the
appropriate device.  Please select the node with which you want
to communicate

Select HL LOGICAL LINK NODE: PSO LLP1
The LLP was last shutdown on MAR 17, 1997 10:10:11.

     Select one of the following:

          F         FOREGROUND
          B         BACKGROUND
          Q         QUIT
```

```
Method for running the receiver:   BACKGROUND
Job was queued as 434423.

   1      Edit Communication Server parameters
   2      Manage incoming & outgoing filers ...
   3      Monitor incoming & outgoing filers
   4      Start LLP

VAX System

To install the HL7 interface on a VAX system, complete the following steps:

1. Create a Username for each non- **V*IST*A** system to be connected to the **V*IST*A** system.
2. If environmental access control is enabled on your system, grant ACL using the utility ACL(D ^ACL). Otherwise, skip this step.
3. Create a login command file for each Username.
4. Set up the DECserver port for each non- **V*IST*A** system to which you will be connecting.
5. Tie the DECserver node/port to the Username through the VMS AUTOMATIC LOGIN file (D ^ALF).
6. Create the VMS terminal characteristics and protection.
7. Create the appropriate entries in the **V*IST*A** DEVICE file (#3.5).

An example of each step is provided on the following pages.

Username Creation (PSO HLDEVICE1)

External Relations

The following software is not included in this package and must be installed before this version of Outpatient Pharmacy is completely functional.

Package	**Minimum Version Needed**
Pharmacy Data Management	1.0
VA FileMan	21.0
Kernel	8.0
PMIS	5.3
National Drug File	3.16
Integrated Billing	2.0
Fee Basis	3.5
Adverse Reaction Tracking	4.0
Inpatient Medications	4.5
IFCAP	5.0
Laboratory	5.2

Data Base Integration Agreements (DBIAs)

Outpatient Pharmacy (OP) V. 7.0 has Data Base Integration Agreements (DBIAs) with the packages listed above, in addition to the following: Consolidated Mail Outpatient Pharmacy (CMOP), Drug Accountability (DA), and Order Entry/Results Reporting (OE/RR). For complete information regarding the DBIA for OP V. 7.0, please refer to the *DBA* [DBA] menu option on FORUM and then the *Integration Agreement Menu* [DBA IA ISC].

Internal Relations

Very few of the options in this package can be invoked independently. Those that can be so invoked independently are

PSO MANAGER	Outpatient Pharmacy Manager
PSO P	Medication Profile
PSO USER1	Pharmacist Menu
PSO USER2	Pharmacy Technician's Menu
Any other option may not run independently.	

Any locally created menu which includes options from this package *must* have the ENTRY ACTION field read: D:'$D(PSOPAR) ^PSOLSET and should have the MENU EXIT ACTION field read: D FINAL^PSOLSET

Package-Wide Variables

The variables PSODIV, PSOINST, PSOIOS, PSOPAR, PSOPAR7, PSOSYS, PSOLAP, PSOPROP, PSOCLC, PSOCNT, PSODTCUT, PSOSITE, PSOPRPAS, PSOBAR0, PSOBAR1 and PSOBARS are used extensively throughout the package. They are set by the routine PSOLSET and are not killed until exiting from the package.

Mail Group Setup for the HL7 External Interface

A mail group and device **must** be set up in order to run the HL7 external interface. The recommended name of the mail group is PSO HLGROUP1. The recommended device name is PSO HLDEVICE1.

Archiving/Purging

For archiving and purging information, see the section titled "Archiving and Purging" in this manual.

Interfacing

For interface information, see the section titled "External Interfaces" in this manual.

Electronic Signatures

Electronic signatures may be established by using the Kernel option, *Electronic Signature code Edit* [XUSESIG]. In Kernel V. 8.0 the *Electronic Signature code Edit* [XUSESIG] option has been tied to the Common Options, under the *User's Toolbox* [XUSERTOOLS] submenu, for easy access by all users.

Menu Assignments

The menu PSO MANAGER should be assigned to the Package Coordinator for Outpatient Pharmacy and also added to the menu of the Site Manager and any ADP/IRM staff that s/he selects to help in the operation of Outpatient Pharmacy. The menu PSO USER1 should be assigned to all pharmacists and the menu PSO USER2 should be assigned to all pharmacy technicians and other pharmacy personnel who may view prescriptions and/or inquire into other Outpatient Pharmacy files.

Security Keys

PSORPH	This key should be assigned to all pharmacists, the package coordinator, and all appropriate members of the ADP/IRM staff.
PSOA PURGE	This key should be assigned to the package coordinator and/or any person who will be responsible for archiving prescriptions.
PSOLOCKCLOZ	This key is used to override the lockouts in the Clozapine option. All members of the Clozapine treatment team must be entered as users on your system and must be given this key. All pharmacists who have the ability to override the lockouts in this option must also hold this key. The Pharmacy Service representative of the Clozapine treatment team should identify these pharmacists.
PSOINTERFACE	This key is used to access the *External Interface Menu* .

File Security

This package requires 21 files in addition to those of the Kernel and other files to which it points, for example the PATIENT file (#2). Information about all files, including these can be obtained by using the VA FileMan to generate a list of file attributes.

Outpatient Pharmacy V. 7.0 Menu Diagrams

Three main menus are exported with the package. The *Outpatient Pharmacy Manager* menu [PSO MANAGER] should be assigned to supervisors, package coordinators and members of the ADP/IRM staff. Pharmacists should have the *Pharmacist Menu* [PSO USER1] and clerks and technicians should have the *Pharmacy Technician's Menu* [PSO USER2].

Routine Mapping

We make no recommendations for routine mapping. However, if you choose to map the Outpatient Pharmacy package routines, you will need to bring the system down and then restart to load the new routines into memory.

Journaling Globals

The primary global used by the Outpatient Pharmacy package is ^PSRX. If you choose to journal, we recommend this global.

Barcodes

This version of Outpatient Pharmacy includes the ability to print barcodes on the patient copy, the pharmacist's copy, and the patient narrative documents for new label stock. There are two options that utilize the barcodes.

Check Quality of Barcode [PSO BARCODE CHECK] is intended to be used to monitor the quality and readability of the barcode before it is mailed.

Barcode Batch Prescription Entry [PSO BATCH BARCODE] is used to actually refill the prescriptions from the document once it is returned.

If you are not using barcodes, you might wish to enter an OUT OF ORDER MESSAGE for these two options.

In the DEVICE file (#3.5), each pharmacy label printer should have the appropriate entries in both the SUBTYPE and DEFAULT SUBTYPE fields. Each of the two fields is the argument of a MUMPS Write command.

Three parameters are used.

X is the barcode height. Values can be "S", "M" or "L". If X is undefined or not equal to one of these, the default value of "S" is used. "S" is 2/10 inch for the DS-220 and 1/6 inch for the MT-290. "M" is 4/10 inch for the DS-200 and 1/3 inch for the MT-290. "L" is one inch for both.

X1 is the value of $X at the left edge of the barcode. If X1 is undefined, the default value of 0 is used.

X2 is the data to be barcoded. Remember that the code 39 character set which is being used by the VA is a limited subset of the ASCII character set containing only the numbers, uppercase letters and eight punctuation characters. In most cases, any other characters are not printed. For example, the barcode for the string 123abc will be the same as that for the string 123.

On most printers, printing a barcode is a graphics operation which causes the value of $Y to be something other than the line count from the top of the page. Forms with barcodes on them must use a form feed to go to the top of the next form rather than a counted number of line feeds. This is the reason that printers being used to print barcodes on outpatient pharmacy labels must be set for a form length of 24 lines or four inches.

The following section, New Label Stock, contains barcode on and off sequences for various printers.

New Label Stock (Version 6.0 and Later Versions)

*****IMPORTANT*****

Please test your new label stock on all printers that you will be using before going into production with new label stock.

Printers that will be printing the new label stock must be set to print at 12 characters per inch, and the form length must be set to 5 inches.

Previously, old label stock printed barcodes in one column at 10 characters per inch. New label stock prints barcodes at 12 characters per inch in 2 columns, (column 54 and 102). The following barcode entries in the TERMINAL TYPE file (#3.2) have worked at either the Birmingham Chief Information Officer (CIO) Field Office or at a site. If you cannot find barcodes that will work for you, please contact your Chief Information Officer Field Office (CIOFO).

Check to see that a line feed is performed after the barcode off sequence is executed. Due to limited space, information has to be printed after certain barcodes print, without relying on a line feed in the Outpatient Pharmacy code. To test this, print a test label for an Rx with no refills. On the center copy of the label, on the next line after the "station number-Rx no." which prints directly under the barcode, one of the two following lines should print clearly:

```
* NO REFILLS REMAINING ** PHYSICIAN USE ONLY *
                        or
    *** This prescription CANNOT be renewed ***
```

If there is a problem, try inserting a line feed at the end of your Barcode Off sequence. (add a ,! to the end of the sequence)

Remember to set your New Label Stock site parameter to Yes.

There are also 3 site parameters that provide patient instructions that will print after each patient's prescriptions. They are "NARRATIVE NON-REFILLABLE RX", "NARRATIVE REFILLABLE RX", and "NARRATIVE FOR COPAY DOCUMENT". The "NARRATIVE FOR COPAY DOCUMENT" will only print if at least one of the patient's prescriptions is subject to a Copay charge.

Glossary

ADP	Automated Data Processing
Archive	Prescriptions, typically those which have been expired or canceled for more than a year, can be saved to tape, and then purged from online storage.
CPRS	Computerized Patient Record System. CPRS is a Graphical User Interface (GUI) in **V***IST***A** that provides order entry and results reporting for multiple packages.
DHCP	See **V***IST***A**.
IRM	Information Resources Management
Prescription	This term is now referred to throughout the software as medication orders.
Purge	Prescriptions, typically those which have been expired or canceled for more than a year, are saved to tape. Purging removes them from online storage.
Reprinted Label	Unlike a partial prescription, a reprint does not count as workload.
V*IST***A**	Acronym for **V**eterans Health **I**nformation **S**ystems and **T**echnology **A**rchitecture, the new name for Decentralized Hospital Computer Program (DHCP).

Appendix A: Outpatient Pharmacy HL7 Interface Specification

A. GENERAL HL7 INFORMATION

Introduction

This document specifies an interface between the **V*IST*A** Outpatient Pharmacy Version 7.0 (OP Version 7.0) application and any automatic dispensing system. It is based upon the Health Level 7 Standard (HL7) Version 2.2.

The term "Level 7" refers to the highest level of the Open System Interconnection (OSI) model of the International Standards Organization (ISO). The OSI model is divided into seven levels or layers. The HL7 Standard is primarily focused on what happens within the seventh or application layer. At this layer, the definitions of the data to be exchanged, the timing of the exchanges, and the communication of certain application specific errors occurs. The lower levels support the actual movement of data between systems.

The lower level communication protocol used in OP Version 7.0 is either X3.28 or the Hybrid Lower Layer Protocol (HLLP) over an RS-232 connection, as supported by the VA **V*IST*A** HL7 Version 1.6 application. Future enhancements to the VA **V*IST*A** HL7 application may include TCP/IP as an option for the lower level communication protocol.

Message Rules

The HL7 Standard describes the basic rules for the exchange of information between two computer systems. The unit of data transferred is referred to as the message. It is comprised of a group of segments in a defined sequence. Each message has a three character code called a message type that defines its purpose. The real-world event that initiates an exchange of messages is called a trigger event. There is a one-to-many relationship between message types and trigger event codes. The same trigger event code may not be associated with more than one message type; however a message type may be associated with more than one trigger event. All message type and trigger event codes beginning with Z are reserved for locally defined messages. No such codes will be defined within the HL7 Standard.

Some special characters are used to construct messages. They are the segment terminator, field separator, component separator, sub-component separator, repetition separator, and escape character. The segment terminator is always a carriage return (CR in ASCII or hex OD). The other characters recommended by HL7 are used in this application (See HL7 Standard V. 2.2, Chapter 2 for details).

Segment Rules

A segment is a logical grouping of data fields. Segments of a message may be required or optional. They may occur only once in a message or they may be allowed to repeat. Each segment is given a name and is identified by a unique three character code. All segments beginning with Z are reserved for locally defined messages. No such code will be defined within the HL7 Standard.

Field Rules

A field is a string of characters. HL7 does not care how systems actually store data within an application. Except where noted, HL7 data fields may take on the null value. Sending the null value, which is transmitted as two double quote marks (""), is different from omitting an optional data field. The difference appears when the contents of a message will be used to update a record in a database rather than create a new one. If no value is sent (i.e., it is omitted) the old value should remain unchanged. If the null value is sent, the old value should be changed to null. In defining a segment, the following information is specified about each field:

a) position - position of the data field within the segment.

b) name - unique descriptive name for the field.

c) ID number - integer that uniquely identifies the data field throughout the Standard.

d) maximum length - maximum number of characters that one occurrence of the data field may occupy.

e) optionality - whether the data field is required (R), optional (O), or conditional (C) in a segment.

f) repetition - whether the field may repeat (N=no; Y=yes; (integer)= no. of repeats).

g) table - a table of values for a field (See HL7 Stand ard V. 2.2, Section 2.4.3.7 for source of tables).

h) data type - restrictions on the contents of the data field (See HL7 Standard V. 2.2, Section 2.4.5).

B. TRANSACTION SPECIFICATIONS

Communication Protocol

The lower level communication protocol used by OP Version 7.0 to transmit data between systems is either X3.28 or HLLP over an RS-232 connection.

A site parameter in the OP Version 7.0 application called External Interface controls transmission of data to the dispensing machine. If the parameter is set to off, no transmission will occur.

Processing Rules

A Pharmacy Encoded Order Message (event type=O01) is transmitted whenever an order is placed in OP Version 7.0 and the criteria is met for the dispensing machine. Upon successful receipt and storage of the message, the dispensing machine will generate and transmit a Pharmacy Encoded Order Acknowledgement Message (event type=O02).

The following HL7 messages will be used to support the exchange of Outpatient Pharmacy data with any automatic dispensing system:

RDE	Pharmacy Encoded Order Message
RRE	Pharmacy Encoded Order Ack. Message
ACK	General Ack. Message

The messages will consist of the following HL7 segments:

MSA	Message Ack.
MSH	Message Header
NTE	Notes and Comments
PID	Patient Identification
ORC	Common Order
RXE	Pharmacy Encoded Order
RXR	Pharmacy Route
ZAL	Allergy List
ZRL	Rx Label
ZML	Multi-Rx Label
ZSL	Suspense Label

Specific Transaction

The Pharmacy Encoded Order Message is as follows:

RDE	Pharmacy Encoded Order Message
MSH	Message Header
[PID]	Patient Identification
{ORC	Common Order
RXE	Pharmacy Encoded Order
[{NTE}]	Notes and Comments
RXR	Pharmacy Route
[{ZAL}]	Allergy List
[{ZRL}]	Rx Label
[{ZML}]	Multi-Rx Label
[{ZSL}]	Suspense Label
}

Notes pertaining to some of the data elements:

[MSH-5] Receiving Application is the name of the dispensing application.

[MSH-10] Message Control ID is the number that uniquely identifies the message. It is returned in MSA-2.

[PID-3] Patient ID is the patient's DFN pointer to File #2 in **V*IST*A**.

[ORC-2] Placer Order Number is a composite field. The first component uniquely identifies an order among all orders. The second component contains the application ID of the placing application.

[ORC-7] Quantity Timing is a composite field which determines the priority, quantity, frequency, and timing of the order. The fourth component is the Fill Date in **V*IST*A** and the fifth component is the Expiration Date in **V*IST*A**.

[ORC-10] Entered By is the person's DFN pointer and name in **V*IST*A** who keyed in the order.

[ORC-12] Ordering Provider is a composite ID field. The first component is the Provider's DFN pointer in **V*IST*A** and the second component is his/her name.

[ORC-15] Order Effective Date is the date/time the order took effect.

[ORC-16] Order Control Code Reason is a coded element field. The fifth component reflects the status of the order (i.e., New, Refill, Partial, Reprint, or Partial Reprint).

[RXE-1] Quantity Timing is a required field but it will not be used in OP Version 7.0. It will always be a null value ("").

[RXE-2] Give Code identifies the substance ordered as encoded by the Pharmacy. The components, in order, are the VA Product ID, VA Product Name, National Drug File, local file pointer, local drug name, and the local file.

[RXE-3] Give Amount - Minimum is a required field but it will not be used in OP Version 7.0. It will always be a null value ("").

[RXE-5] Give Units identifies the units for the give amount as encoded by the VA National Drug file.

[RXE-6] Give Dosage Form is a coded element field. The fourth component is the pointer to the Dose Form file. The fifth component is the form name, and the sixth component is the name of coding system (99PSF).

[RXE-11] Dispense Units identifies the units for the dispense amount as encoded by the Pharmacy.

[RXE-14] Pharmacist Verifier ID identifies the pharmacist who verified the order. The first component is the DFN pointer in File #200 of **V*IST*A** and the second component is the name.

Notes: (Continued)

[RXE-15] Prescription Number is the external Outpatient prescription number.

[RXE-18] D/T of Last Refill identifies the last date the patient received this particular drug (i.e., Last Dispense Date).

[NTE] The Set ID field will identify the NTE segment (1=Med. Instructions; 2=Patient Instructions Narrative; 3=Drug Warning Narrative; 4=Profile Information; 5=Drug Interactions; 6=Drug Allergy Indications). The Comment field will contain the respective information.

[RXR-1] Route is a coded element field. The last three components are used for the local identifier, text, and coding system.

[ZRL-2] Site Address is a repeatable field to allow for addresses in **V***IST***A** that contain three lines.

[ZRL-4] Clinic is the field that identifies the clinic where the order originated.

[ZRL-5] Cosigner is the field that identifies the person who cosigned, if any. The first component is the pointer in File #200 and the second component is the name.

[ZRL-6] SSN is the last six numbers of the patient's SSN with a hyphen.

[ZRL-7] SSN Barcode is the patient's SSN without hyphens.

[ZRL-8] Rx Patient Status is the field that identifies the patient status code.

Notes: (Continued)

[ZRL-9] Temp. Address Date identifies the date through which the temporary address is valid.

[ZRL-10] Method of Pickup is a string type field identifying how the order will be picked up. It applies only to Window orders and is null in the case of Mail orders.

[ZRL-11] Copay is the field that specifies whether a copay charge is associated with the order. It will either be COPAY or NO COPAY.

[ZRL-12] Cap is the field that specifies whether a safety cap is necessary for the order.

[ZRL-13] Refillable is the field that specifies whether the order is refillable. It will either be REFILLABLE, NON-REFILLABLE, or NON-RENEWABLE.

[ZRL-14] Refill Status is the field that identifies the number of refills remaining before the expiration date. It will either be "Number Refills remain prior to"or "Last fill prior to". The expiration date is located in piece 5 of the quantity timing field (ORC-7).

[ZRL-15] Routing is the field that identifies how the patient will receive the medication (i.e., at the Window or via Mail).

[ZRL-16] Mfg -Exp is string field that contains a line that appears only when the patient is a Nursing Home patient. It will be either null or "Mfg-----Exp-----".

[ZRL-17] Label Status identifies the status of the order. It will be either REPRINT, PARTIAL, REPRINT/PARTIAL, or null.

[ZRL-18] Label Printed is the date and time the label printed.

[ZRL-19] Fill Date is the date that the prescription was filled.

[ZRL-20] Fill Number is the field that identifies which fill the order is.

[ZRL-22] Rx Barcode Value is the field that contains the barcode value. It is the station number and the internal Rx Number separated by a hyphen.

[ZRL-23] Drug Warning is a field that identifies any drug warnings. It will be either "DRUG WARNING #,#,#" or null.

[ZML] This segment is repetitive. It repeats for all the drugs for the patient.

[ZSL] This segment is repetitive. It repeats for all suspended Rx's for the patient.

[ZAL] This segment is repetitive. It repeats for all of the patient's allergies/adverse reactions.

[ZAL-1] Allergy ID field is the internal entry number of the **V***IST***A** file for the allergy.

[ZAL-2] Mechanism is a string type field that will either be ALLERGY or ADVERSE DRUG REACTION.

Notes: (Continued)

[ZAL-3] Allergy type is a string type field with a value of either DRUG, FOOD, or OTHER.

[ZAL-4] Verified is a string type field which will either be VERIFIED or NON-VERIFIED.

[ZAL-5] Severity is a string type field which will either be MILD, MODERATE, SEVERE, or UNKNOWN.
